ABSTRACT

PrabandhX is a comprehensive organization management system that centralizes project management, task tracking, team collaboration, and file sharing into a single unified platform. It replaces manual workflows with a digital solution featuring role-based access for Admin, Manager, and User. Built with Spring Boot and React, it delivers secure JWT authentication, real-time analytics, complete audit trails, and gamification through leaderboards. The platform ensures data privacy with user-specific file views and 7-day expiry for invitations and shareable links.

PROBLEM FORMULATIONS

Modern organizations struggle with fragmented manual processes, lack of real-time visibility, and ineffective collaboration—challenges PrabandhX solves with a centralized, role-based platform offering real-time dashboards, secure file sharing, and audit trails, while role-based access control, 7-day expiry for shared links, and IP-tracked activity logging ensure security and accountability.

Guided by: Asst. Prof. Rakesh Kumar Ray
